Modern Co-Living Within Denver's Historic 5-Point District

stok on Welton is a unique mixed use co-living project targeting net-zero energy consumption. Located in the 5-Points Historic Cultural District in Denver, the proposed building carefully integrates cutting edge technology and forward thinking design elements while respecting the site's context and past. With a combination of nine 4-bedroom units, one 2-bedroom unit, and 112 micro-units, the project delivers an incredible 240 units per acre. The building is located along a major public transit corridor allowing residents to enjoy car-free living minutes from central downtown. 4 stories of heavily amenitized co-living program rests above a commercial level that activates the street and sidewalk, where residents of the building and city mingle together.

Design Features

- Net-zero energy consumption
- Photovoltaic system
- Solar thermal hot water system
- Reduced parking
- Roof deck with pool
- 2 common spaces at each residential level, complete with commercial kitchens, adjacent to light rail
- Within the 5-Points Historic Cultural District
- Co-living pods at each level to create community
